

Do you suffer from algae? Remove and prevent

Algae control

Give water plants room to grow

Floating algae transform pond water into a green slurry. Fibrous and slime algae ruin pond pleasure and inhibit plant growth. Velda offers various methods to control algae and give water plants a chance to develop.

two methods

What causes the algae problem?

Your pond is a closed eco-system. Bacteria convert biological waste into nutrients for aquatic plants, which in turn release oxygen into the water for a healthy pond environment. Even if a pond has been duly laid out, there may arise problems, which upset the natural balance. Unwanted growth of algae can arise then, which subsequently restore this balance.

• the first step to an algae-free pond

Water plants will absorb nutrients and catch the sunlight. Apply floating and oxygen plants, so that algae will not get the opportunity to develop. Inspect the quality of the pond water and, if necessary, adjust the values. In time, the pond environment will stabilize.

• two types of algae

Fibrous and slime algae make lower demands on temperature and quality of water. Consequently, algae can grow in conditions at which micro-life and water plants can not yet develop optimally. Besides, they absorb nutrients and catch the sunlight, so that water plants have no chance.

Floating algae develop rapidly in newly made ponds with nutrient-rich water. Pond water will turn green. Even worse is the fact that the growth of oxygen plants will stagnate.

• fibrous and slime algae

Quickly algae-free

A permanent solution for the algae problem is **T-Flow Tronic**. Owing to electric pulses between the copper anode and stainless steel cathode, copper ions are released. These ions eliminate nasty fibrous and slime algae quick and easy.

• floating algae and germs

Fed up with green water

A permanent solution for green pond water is a **UV-C Filter**. The ultraviolet radiation of the lamp destroys floating algae, germs and moulds. This ensures crystal clear water and a healthy pond environment for fish and water plants.

BON

Benefit from this offer!

When you buy an T-Flow Tronic or UV-C Filter you get an anode or lamp **FOR FREE***

or UV-C 5 W / 7 W / 9 W / 11 W / 18 W / 36 W / 55 W
Send the completed offer form, the original receipt and the bar code from the packaging to: **Velda BV**,
PO Box 29, 7500 AA Enschede, The Netherlands

* the anode or lamp is send to you by Velda.
offer valid 31-12-2013

GRATIS
anode or
lamp*

Permanent algae control

The copper anode or UV-C lamp ensures removal of algae. It will last for about one pond season. Replace the anode or lamp in spring to guarantee a permanent result.
