

## Unwanted visitors? Protect your pond fish

## Safe in the pond

### Stop the poachers!

The growing heron population is a problem for pond lovers. Fish are the main feed of blue herons. Velda brings relief in this case with various methods to keep herons away from your loved pond fish.

### Protection in every season

In a watery country, the great blue heron often is an unwanted guest on pond sides. Colourful fish in a clear pond are an easy prey for this fish eater, which can be recognized by the black crest at the back of its head. On its long legs it carefully wades through shallow water or it quite still waits for its prey. The pond fish is taken by surprise of the super-fast movement of the long bill. An adult heron can swallow a fish of 30 cm. He will come back till it has fished out the pond completely.

#### • spring

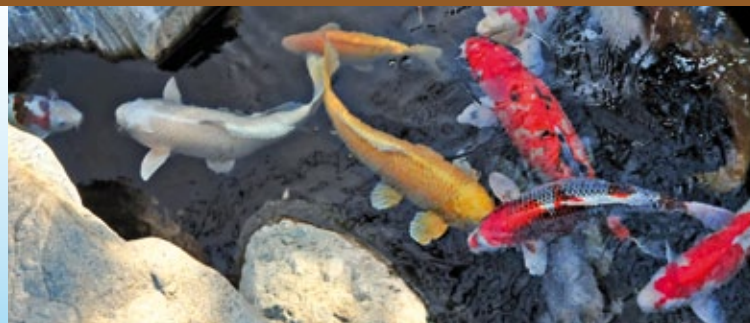

Just like all birds also herons are having young now, which have to be fed. Especially in shallow ponds, where fish can not properly hide, herons are a threat for your fish.

#### • summer

Young herons have fledged and have to look for feed themselves. Especially early in the morning and towards the evening they are active. Young fish are in danger and they need protection.

#### • autumn

In autumn food supply for herons is restricted. As your fish are moving less quickly in cold water, they are an easy prey for a hungry heron.

protected against herons

• **3-position switch**  
combination of flashes of light, sounds of animals of prey and ultrasonic sound is most effective

• **motion sensor**  
set for objects having the size of a heron or cat, innocent birds will not be detected

• **day/night indicator**  
shuts the system down on dusk and reactivates at dawn

• **variable range** 180° and 25 m adjustable to your own garden environment

• **aluminium stand** of 100 cm

### Flashes and scare noises

The motion sensor of the **Pond Guard shuffle** detects herons and cats and emits bright flashes of light and scare noises. The shocked intruder will run away at once.

• **synthetic stakes**  
to place the fence around the pond

• **80 metres of electric wire**  
sufficient to protect 40 m of pond edge with 2 wires

• **transformer**  
with cable and plug gives of harmless electric pulses to the wire around the pond

• **2 x 5 m red and green wire**  
with connectors for installing the Pond Protector

### Harmless but also effective

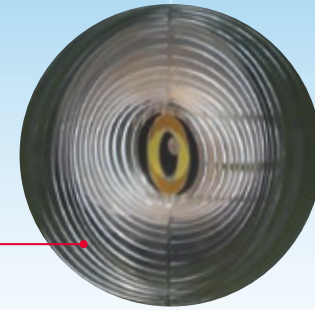

The **Pond Protector** is an electric fence to protect your loved pond fish against herons and cats. Upon touching there will be a shock reaction which causes them to fly.

• **detering effect**  
by holographic eyes of predators and reflection of daylight

• **spinning pendent**  
shining stainless steel will rotate by the wind

• **floating ball**  
silver-coloured with ballast in order to fixate

• **decorative element**  
place several balls and spinners for an enhanced effect

new

### Reflection of daylight and scary eyes

The floating **Heron Stop Reflector** and pendulous **Heron Stop Spinner** will scare away, quick and easy, unwanted herons and pigeons from your garden or balcony.
