# Pressure filters for every pond

Ideal for  
a waterfall  
or stream

## Clear Control

### Clear water guaranteed

If you want to install a fountain, waterfall or stream, it is important that the pond water will become and remain crystal clear. **Clear Control** pressure filters can *withstand high pressure* and the water can bridge a difference in height after the filter. Ideal for a waterfall.

- **Multi position valve**

makes it easy to clean the filter, empty the pond or using fish medication

- **UV-C Unit**

destroys green floating algae and germs

- **Japanese mat**

removes dirt particles from the pond water

- **Active filter carbon**

filters the finest dirt particles and colourings

- **Lava grit**

excellent adherence of micro-organisms

*these filter materials are optional for the Clear Control 100*

# Give nature a helping hand

A garden pond is more than just a container of water. It is a natural water biotope on a small scale. In free nature ponds are often much larger, biological processes are functioning properly, resulting in clear and healthy water. As to a garden pond nature has to be given a helping hand in order to reach a biological balance. Only then you can go on enjoying clear water, healthy plants and satisfied fish. Even if a pond has been properly laid out, problems may arise, which upset the biological balance. Velda brings relief with a suitable filter system for every pond.

## Multiple functions

Pressure filters are quite suitable, besides their filter function, to feed streams, waterfalls or fountains with clear water. As the pressure filter can properly stand high pressure, it is capable to bridge a difference in height. Besides normal filtration various directions of water current are possible for administration of fish medicine, cleaning of the filter or emptying the pond. If a backwash function is involved, the water flow goes in opposite direction through the filter and carries along any accumulated dirt. A pressure filter is very user-friendly and easy to clean.

By fitting a heating element (Velda Pond Heater) in the filter in winter time, it can continue to operate without any problems. The pond remains clear and free of ice.

**Clear Control 25** + UV-C 9 Watt *also available as set with up to 10.000 litres of water Green Line 5000 pond pump + hose*

**Clear Control 50** + UV-C 18 Watt *also available as set with up to 20.000 litres of water Green Line 8000 pond pump + hose*

**Clear Control 75** + UV-C 36 Watt *also available as set with up to 30.000 litres of water Green Line 12500 pond pump + hose*

**Clear Control 100** *also available: UV-C 55 Watt up to 60.000 litres of water recommended pump: Green Line 20000*
