

SANIKOI

Healthy pond fish

Give them high-protein feed for sound growth

Gold Protein Plus

52%
protein

Gold Protein Plus is high-quality floating fish feed. This protein-rich feed will be particularly appreciated by koi fans: it is important to ensure *optimal growth and vibrant colours*. The special keep-fresh packaging can be closed airtight to preserve taste and quality of the food.

Fish Feeder Easy

feed dispenser
for pond fish

- **Feed container**

for 2,5 litres of fish food

- **Button operation**

for frequency
and amounts

- **Dosage screw**

for different sizes of feed

Get the best for your fish

Adequate and regular feeding is essential for all pond fish. Particularly for koi, to keep them active and healthy. Use an automatic fish feeder to be assured of several feedings every day.

Perfect digestion, minimal pollution

As well as the high protein content, Gold Protein Plus includes more than 10% crude ash for sound growth and healthy fish. This ash percentage means that no less than 97% of the feed is digested and the fish absorb the protein perfectly. Excreta are kept to a minimum and so the pond water stays clean longer. Dispense small portions several times a day so that the fish grow fast and produce less waste. Enough room to move around in, and higher water temperatures, also help them to grow. In the wild, fish are constantly looking for food. Their digestion is geared to this. In the pond, large amounts of feed can cause indigestion and pollution of the pond environment. That is why SaniKoi food products contain only natural ingredients to reduce any extra pollution of the pond water.

Complete line of quality feed

Gold Protein Plus is the latest fish feed in the SaniKoi range. Vary the feed for your fish and try out the other SaniKoi varieties as well.
