

Ultra Protector

Complete set for electric fencing

- Boundary for pets and farm animals
- Keeps out unwanted animals and birds
- Protection for pond fish, crops and vegetation

Keeps animals in their own area

This electric fence is not just a physical barrier, it is also an instinctive barrier for pets and farm animals. When they touch it, animals feel a shock that keeps them away from the fence in the future. Apart from the shock response, this method is safe for all animals and humans.

Protection for pond fish

A very effective way of keeping unwanted animals away from the pond is to install this electric fence. The unpleasant experience of the shock causes an instinctive flight response in herons, cormorants and cats so that they stay away. Fish will be safe in the pond again.

Flowerbeds and crops

Prevent losses of crops and vegetation by keeping animals and birds out of the area. Decide on the height of the uprights and the electric fence yourself. The Ultra Protector provides optimal protection for your garden.

Ultra Protector | Product specs

Maximum peak voltage 8.5 kV

Resistance of electric fence 8 ohm/m

Professional electric fence unit

LED lights show correct operation

20 uprights with base and peg

for fence at different heights

200 m of electric wire + connections

to protect 100 m with 2 wires
