Sanikoi has four broad based remedies for the most common fish diseases. The medicines are available in two sizes and can be applied directly in a pond. Already after a week recovery can be observed.

- Bactimon** against bacterial infections
- Sapro** against fungous infections
- Paratex** against skin parasites
- Witte Stip** against white spots and dark deposit

Bring the completed diagnosis form to your pond specialist and ask him/her for the best approach.

# The best for your fish

Stress, poor appetite and listlessness are symptoms of a dysfunctional immune system. Vital brings relief for your fish.

## Vital for revitalised fish

After fish disease, transport or winter-time, your fish are quickly in top condition again with SaniKoi Vital. Aloë Vera supports the mucous layer of fish and functions as a natural bandage for wounds. The iodine-complex prevents diseases of the thyroid gland and the nervous system. Vitamin C stimulates the immune system, prevents organ bleedings and gill disease.

A healthy stock of fish starts with healthy pond water. The presence of harmful substances, like nitrite and ammonia can be fatal to your fish.

## LiquiBac for a healthy pond

With these liquid bacteria the pond environment is quickly balanced again after water refreshing or medicine use. It removes organic bottom sludge and harmful substances like ammonia and nitrate. A biological balance stimulates plant growth and inhibits algae.

## Gold Protein Plus

**Additional protein for rapid growth**  
Gold Protein Plus is high-quality floating fish feed: the best for your fish. As well as the high protein content, Gold Protein Plus includes more than 10% crude ash for sound growth and healthy fish. This protein-rich feed will be appreciated by koi fans: it is important to ensure optimal growth and vibrant colours.

## Colour Hi-Grow Mix

**Lively colours and growth**  
Colour Hi-Grow Mix contains Astaxanthin and Spirulina for a beautiful range of colouring of your koi. Owing to its rich composition and special additives it is a very complete fish feed. The addition of Astaxanthin and Spirulina gives your koi lively colours. The added vitamin complex has a favourable effect on the resistance against diseases.

## Staple Prime

**Basic feed for healthy fish**  
Staple Prime is 100% pure natural fish feed and easily digestible. It is an excellent food product for daily care of koi and precious pond fish. Besides natural ingredients, like fish meal and fish oil, it contains wheat germs for an excellent digestion and well-being of your fish. The added krill meal is very nutritious and will stimulate ingestion.

## Excellent All-Round

**Complete feed for good growth**  
Excellent All-Round is a high grade feed that is rich in protein, meant for healthy koi and cypriniformes. Just like the other SaniKoi food products it contains chicory components which stimulate intestinal flora. The addition of Astaxanthin gives your fish lively colours. The added krill meal is very nutritious and will stimulate ingestion.
