

Is your pond not clear?
Filtration brings relief

Pick your filter

Give nature a helping hand

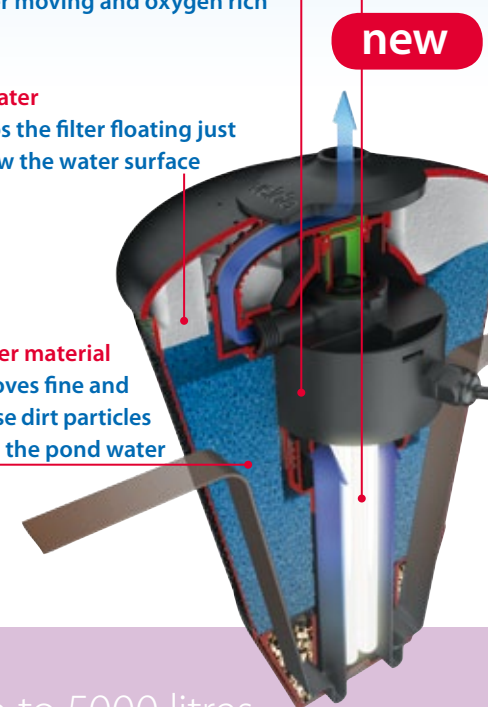

Pure water is important for the condition of aquatic plants, pond fish and micro-organisms. Even if a pond has been properly laid out, problems may arise, which upset the biological balance. For many ponds a filter brings relief.

- **UV-C Unit**
destroys green floating algae and germs for crystal clear water and a healthy pond environment

- **Built-in pump**
the constant water circulation through the filter will keep the water moving and oxygen rich

- **Floater**
keeps the filter floating just below the water surface

- **Filter material**
removes fine and coarse dirt particles from the pond water

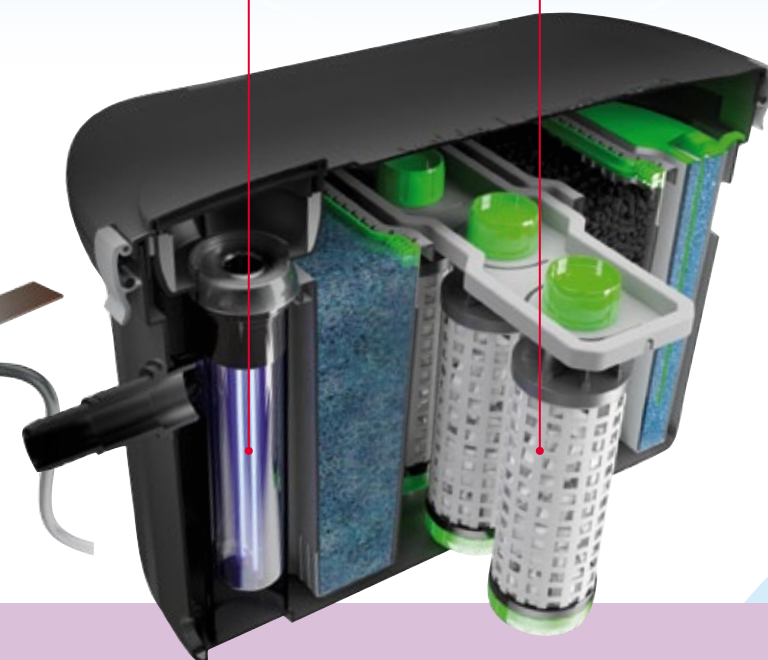

• up to 5000 litres

Floating pond filtration

The **Floating Combi Filter** is a complete floating filter in which the filtered water flows over the top of the filter. The combi filter is ready for use and does not interfere the surroundings: place the filter in your pond and that's that!

- **UV-C Unit**
destroys green floating algae and germs for crystal clear water and a healthy pond environment

- **Japanese mat**
removes coarse dirt particles from the pond water
- **Filter medium**
absorbs nitrite and nitrate protractedly
- **Active carbon**
filters even the finest dirt particles and colourings

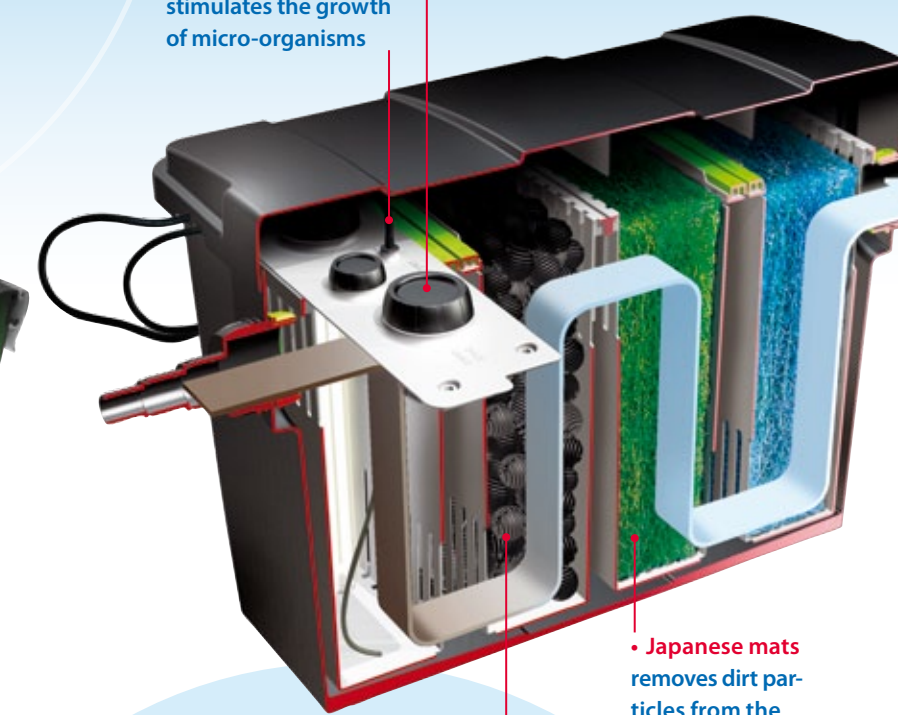

• up to 10.000 litres

Compact and complete

The **Cross-Flow Swirl** is a compact filter with removable cassettes and rotating carousels. The pond water will swirl through the various filter materials. This ultimate filtration process guarantees crystal clear pond water!

- **UV-C Unit**
destroys green floating algae and germs for crystal clear water and a healthy pond environment

- **Aeration**
extra oxygen in the filter stimulates the growth of micro-organisms

- **Bio filter balls**
excellent adherence of micro-organisms

• 20.000 - 60.000 litres

Large and multifunctional filter

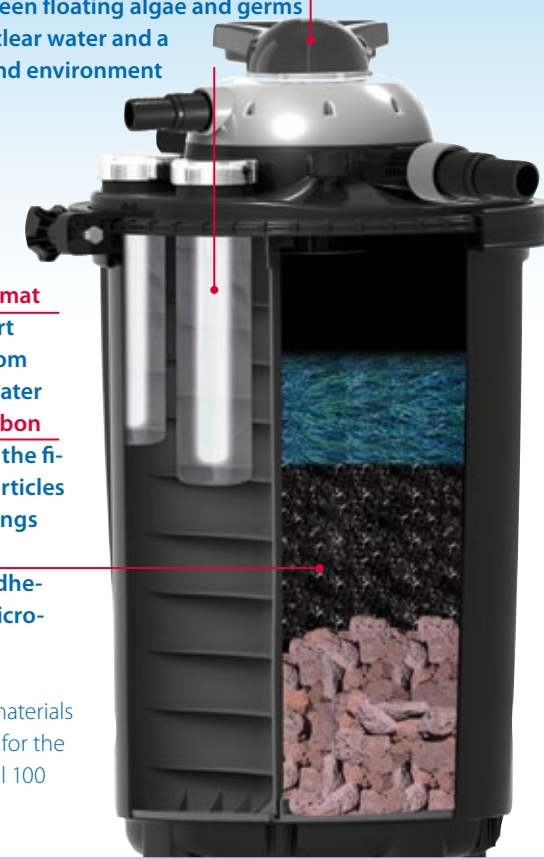

The **Giant Biofill XL** is a large multichamber filter: ideal for koi ponds. The water flows up and down through the removable cassettes containing Japanese mats and bio filter balls. Aeration in the filter stimulates the biological filtration.

- **Multi position valve**
makes it easy to clean the filter, empty the pond or using fish medication

- **UV-C Unit**
destroys green floating algae and germs for crystal clear water and a healthy pond environment

- **Japanese mat**
removes dirt particles from the pond water
- **Active carbon**
filters even the finest dirt particles and colourings
- **Filtra-Sub**
excellent adherence of micro-organisms

these filter materials are optional for the Clear Control 100

• up to 60.000 litres

Pressure filters for every pond

If you want to install a fountain or waterfall, it is important that the pond water will become and remain clear. **Clear Control** pressure filters can withstand high pressure: ideal for a waterfall.
